

# EVOLVE34™

LAPIDUS CORRECTION SYSTEM

Your Lapidus, your way. A comprehensive assistant allowing multiple fixation options to support your preferred approach.

## BUNION SYSTEMS

The **Evolve34™ Lapidus Correction System** is designed to provide powerful correction, predictable results, and procedural flexibility. The design allows for 2-in-1 correction of both the intermetatarsal angle and the frontal plane while also giving surgeons the ability to joint prep and fixate according to their preferred method.

## FEATURES & BENEFITS

### FLEXIBILITY

Allows for any joint prep desired and fixation choices based on surgeon preference, empowering the surgeon to perform the procedure the way *they* want.

### ANATOMICAL CORRECTION REFERENCE

The jig is anchored on the 2<sup>nd</sup> metatarsal, providing the surgeon with an anatomical reference for correction during the procedure. The optional cut guide is designed to minimize shortening of the 1<sup>st</sup> metatarsal and allows for cuts perpendicular to the 2<sup>nd</sup> metatarsal.

### COMPREHENSIVE ASSISTANT

Evolve34™ is an all-in-one, hands-free tool that helps the surgeon with correction, distraction, and compression. No need for multiple pieces.

## EFFICIENT INSTRUMENTATION

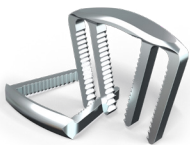

The Evolve34 Lapidus Correction System comes in a small sterilization tray with the reusable jig and other instruments, along with a procedure pack for disposables.

## FLEXIBLE FIXATION

Your Lapidus, your way. Evolve34 is compatible with multiple fixation options.
